

Soft to the hand. *Held to a standard.*

Knitwear cut, sewn, printed and
packed under one roof in Egypt, and
shipped to retailers anywhere in the
world.

01 · Who we are

Silk is the garment. Stone is the factory.

Silkstone Fashion is a knitwear manufacturer in Egypt, founded as an Egyptian-Spanish partnership and owned equally by Boldbridge Capital and Aletex Group. European buying discipline on an Egyptian production floor: fabric inspected, cut, sewn, printed and packed under one roof, with every order recorded from roll to carton.

What we make	Knitted garments: T-shirts, long sleeves, polos, sweatshirts, hoodies, joggers and other jersey and fleece basics, for men, women and children.
Who we make it for	International retailers and brands. Clients include H&M, DeFacto and LC Waikiki, and retailers in the United States.
How we work	CM, CMT or FOB, to the buyer's tech pack. Minimum 20,000 pieces per style, trial orders from 10,000.
How we are checked	WRAP, Sedex SMETA, ISO 9001, 14001 and 45001, GOTS, OCS, RCS and GRS. Buyer audits welcome.
Where	10th of Ramadan City, Egypt, about an hour from Cairo International Airport, shipping from Port Said.

roof

Fabric to carton, nothing subcontracted

Our aim is to be the manufacturing partner international brands trust first: for quality that does not vary, for an operation that runs to plan, and for records a buyer can read.

02 · Ownership

Two partners. *One factory.*

Discipline from Barcelona, depth from Egypt, under one roof.

Silkstone is owned 50% by Boldbridge Capital and 50% by Aletex

Group, and run day to day from the production floor.

Boldbridge Capital

A UK-headquartered group founded in 2005, operating in Egypt, Saudi Arabia and the United Arab Emirates, across fibre optic cable and precast concrete manufacturing, infrastructure and engineering, smart city development and strategic investment. Led by Hany Naim, a Forbes Business Council member with twenty-five years building infrastructure across the Middle East and Africa.

boldbridge.co.uk

Aletex Group

A circular knitwear group based in Canet de Mar, Barcelona, founded in 2008, designing and producing knitted collections for global fashion brands from trend research to the finished product. Its clients include Zara, Bershka, Pull&Bear, Massimo Dutti, H&M, Urban Outfitters and Anthropologie. Aletex gives Silkstone its European buying discipline and its route into Spanish retail.

03 · The way we work

Long-term, *and written down.*

We do not chase one-season orders. The factory is built for programmes that repeat: the same basics, in the same quality, delivered to plan year after year. Three commitments hold that together.

The sewing floor.

Partnership

Buyers deal directly with the people who make their order. Prices, capacity and problems are put on the table early. A programme is planned with the buyer's calendar, not against it.

Transparency

Every stage is managed in an integrated ERP: real-time monitoring of production, order-based tracking, in-line and final quality recorded digitally, and client access to production status and quality reports as they are produced.

Operational discipline

A full operation breakdown before the first piece is sewn, hourly output by operation, marker efficiency known on the order, and a zero defects policy enforced by three inspections rather than one at the end.

People

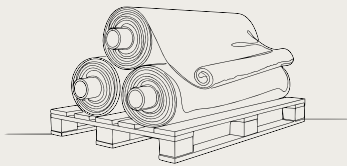

People are the asset the factory runs on. Continuous skill development, a safe, fair and inclusive workplace, and ethical, transparent management, audited under WRAP, SMETA and ISO 45001. Employee satisfaction is treated as a driver of stable production, not a cost.

Responsibility

Environmental, social and governance principles built into daily operation: responsible use of resources under ISO 14001, no hazardous chemicals in processing, and certified organic and recycled fibre programmes for buyers who need them.

04 · Capabilities

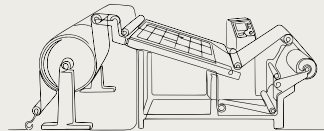

Fabric in. *Garments out.*

01

Fabric sourcing

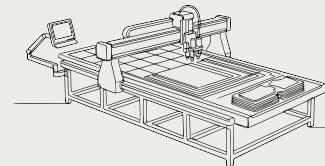

Yarn and knitted fabric from Egyptian mills and partner mills abroad, through Aletex when the buyer prefers. Country of origin declared for all cotton. Better Cotton, organic and recycled yarn with transaction certificates.

02

Fabric inspection

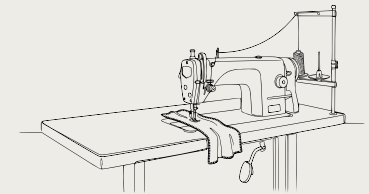

Every incoming roll runs through the inspection machine. Defects, shade and weight are recorded against the roll number before it is released to the floor.

03

Computerised cutting

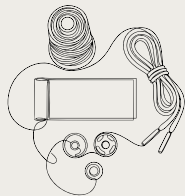

Digital markers, automatic cutting heads, every lay logged with plies and consumption. Each cut bundle carries the lay number so any garment traces back to its rolls.

04

Sewing, sixteen lines

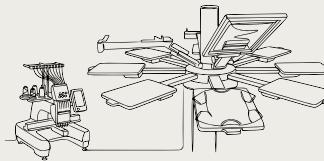

Sixteen lines running, thirty-three at full capacity. Each style has a full operation breakdown before the first piece is sewn; hourly output by operation goes straight into the ERP.

05

Trims and labels

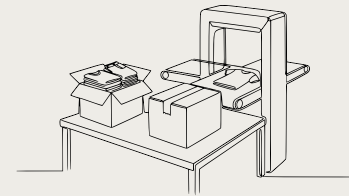

Neck labels, care labels, drawcords, eyelets, snaps, buttons and zips, sourced to the tech pack and pull-tested per batch.

06

Print and embroidery

Rotary and continuous printing, screen and transfer work, and an embroidery department, all beside the sewing floor.

07

Packing and dispatch

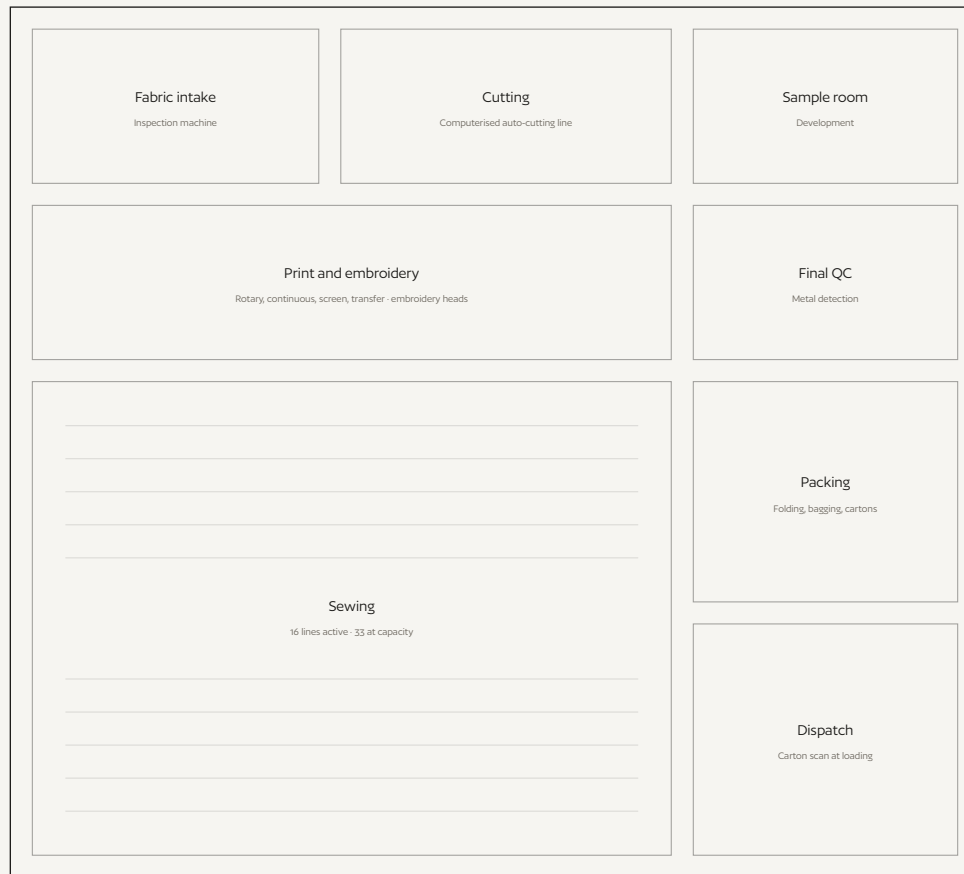

Final random inspection to the buyer's AQL, every garment through a calibrated metal detector, then folded, bagged, labelled and packed to the carton ratio. Cartons scanned at sealing and at loading.

*Seven stages.
One roof.
Nothing
subcontracted.*

Every stage is inside one building under our own supervision, so nothing is untracked and no part of the order is an invoice from a third party.

05 · Equipment and records

What is on the floor.

Schematic layout, not to scale.

Fabric intake	Fabric inspection machine, 100% of rolls. Records: roll number, mill lot, width, GSM, defect points, result.
Cutting	Computerised auto-cutting line with digital markers. Records: lay number, marker, plies, pieces, consumption, rolls used.
Print and embroidery	Rotary and continuous printing, screen and transfer, embroidery heads. Records: run reference, colours, wash and crock tests.
Sample room	Dedicated development department for proto, fit, pre-production and shipment samples. Records: stage, comments, approval.
Sewing	Sixteen active lines, thirty-three at full capacity, in-line inspection inside each line. Records: hourly output by operation, efficiency, faults with corrective action.
Final QC	Final random inspection to AQL, calibrated metal detector, broken needle policy, button and snap pull tester. Records: lot, sample size, defects by class, result.
Packing	Folding, bagging, size stickers, carton ratios, scanning at sealing and loading. Records: carton number, size ratio, pieces, weight, lots, status.

06 · Quality and product safety

Checked three times. *Written down every time.*

Quality is a digitally managed system with a zero defects policy, audited to the standards our buyers ask for.

Before cutting

Fabric inspection

Every roll through the inspection machine. Defects, shade and weight recorded against the roll number and mill lot.

During sewing

In-line inspection

Checks inside each line while the garment is built, recorded by operation with the inspector's name and the corrective action.

After packing

Final inspection

Inspected to the buyer's AQL, then every piece through a calibrated metal detector in a secured zone before the carton is sealed.

- **Needles.** Every broken needle logged, every fragment recovered and matched before a replacement is issued.
- **Metal.** A calibrated metal detector checks every garment inside a secured zone before packing.
- **Pull tests.** Buttons, snaps and drawcord tips tested per batch for durability and child safety.
- **Chemicals.** No hazardous chemicals in stain removal or processing; restricted substance lists followed.
- **The ERP.** In-line and final results recorded against order, line and operation. Buyers see quality reports as they are produced, and every carton traces back to its rolls.

The checking table.

Checking at the finishing tables.

07 · Certifications and compliance

Audited to the standards *buyers ask for.*

Nine standards held by Silkstone. Certificate numbers and copies go to buyers on request. Buyers with their own programmes, including Higg FEM, Better Cotton and brand codes of conduct, are supported.

08 · Products

The wardrobe.

Knitted basics for men, women and children, made to the buyer's tech pack. What follows is our standard construction, not a limit: if it is knitted and sewn, send the tech pack and we quote it.

T-shirt

Single jersey, round neck, rib neckband, set-in sleeve. 140 to 220 gsm.

Long sleeve T-shirt

The T-shirt construction with full-length sleeves and ribbed cuffs. 160 to 220 gsm.

Polo

Pique, flat-knit collar and cuffs, two or three button placket, side vents. 180 to 240 gsm.

Sweatshirt

Crew neck, rib cuffs and hem, loopback or brushed fleece. 260 to 400 gsm.

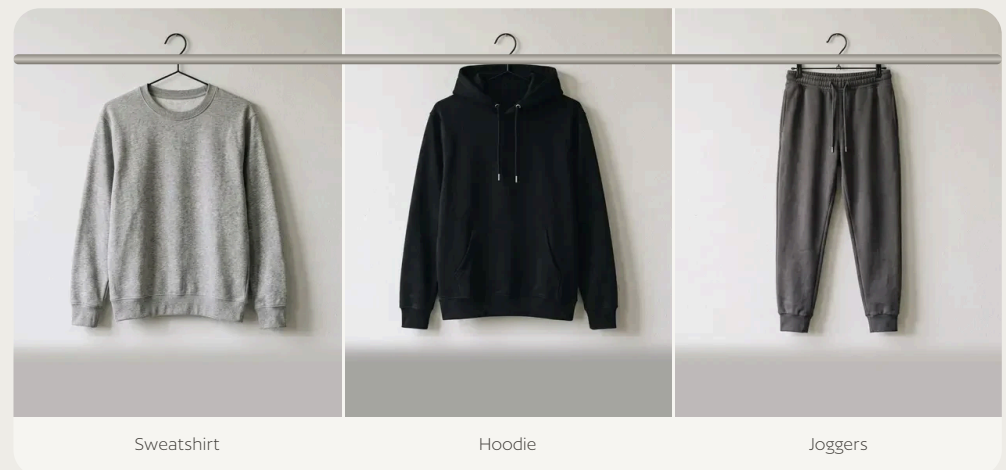

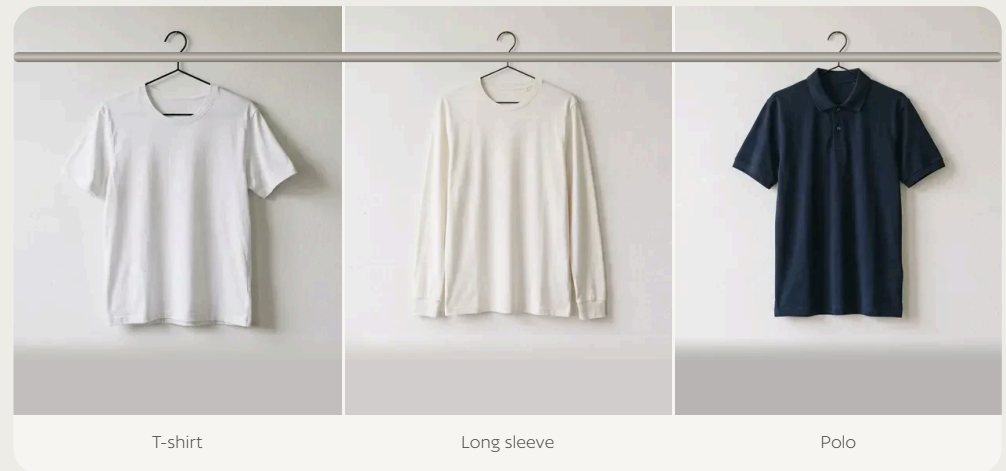

Hoodie

Pullover or full zip, two-piece lined hood, drawcord, kangaroo pocket. 280 to 450 gsm.

Joggers

Elasticated drawcord waist, side pockets, ribbed cuffs, tapered or straight. 260 to 400 gsm.

Fabrics: single jersey, interlock, rib, pique, loopback, brushed fleece. Fibre: cotton, organic cotton, recycled cotton and blends, with certificates where claimed.
Sizes XS to 3XL, graded to the buyer's chart. Garment photographs illustrate our standard styles.

09 · Working with Silkstone

How we take work.

CM

Cut and make. You supply fabric and trims; we cut, sew, finish and pack.

CMT

Cut, make and trim. You supply fabric; we source labels, drawcords, zips and packaging to your specification.

FOB

Full package. We source fabric and trims, produce, and deliver to port.

Minimum	20,000 pieces per style. Trial orders from 10,000.
Lead time	Quoted per order once fabric is confirmed.
Samples	Dedicated sample room for proto, fit, pre-production and shipment samples.
Fabric	Egyptian mills and partner mills abroad, through Aletex when preferred. Better Cotton, organic and recycled yarn with transaction certificates.
Decoration	Print, embroidery and appliqué in house. Labels and hangtags to your artwork.
Visibility	Order-based tracking in the ERP; client access to production status and quality reports as they are produced.

Every stone in place.

One order, followed from roll to sealed carton: roll inspection results, cutting lays with consumption, hourly line output, in-line faults with corrective action, final AQL inspection, and carton scans at sealing and loading. The same record the factory works from is the one the buyer can see.

Clients include H&M, DeFacto and LC Waikiki, and retailers in the United States. References on request.

10 · Location

Close to Europe. *Built for export.*

Egypt is the nearest large garment producer to Europe with duty-free access on three sides. It grows its own cotton, spins and knits it, and ships from the Mediterranean. The factory is about an hour from Cairo International Airport.

- **Time.** Cairo is one to two hours from every European buyer's clock.
- **Cotton.** Grown, ginned, spun and knitted within a few hours of the factory, with origin documented.
- **People.** One of the largest garment workforces in the region, with labour and energy costs below Turkey and southern Europe, and WRAP, Sedex and ISO 45001 records showing how people are treated.

Typical sea transit from Port Said. Barcelona 3 to 4 days, Istanbul 1 to 2, Rotterdam 8 to 10, Stockholm 10 to 12, New York 14 to 18. Air freight to any European hub in one day.

Barcelona	Aletex, the Spanish partner, one to two hours behind Cairo
London	Boldbridge Capital, two to three hours behind Cairo
New York	Six to seven hours behind Cairo, a full morning of overlap
